Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1,6-8,40,45-46 are rejected under 35 U.S.C. 102(e) as being anticipated by Dishman et al. (6,181,450).

Dishman discloses an apparatus and method for transmitting data comprising: an input that receives a digital data to be transmitted; a plurality of programmable modulators (24); a plurality of programmable mixers (28); a plurality of programmable band pass filters (30) and a summation unit (32). The apparatus is integrated within a single integrated circuit (10a).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-9, 40-46 are rejected under 35 U.S.C. 103(a) as being unpatentable over Salomon Serfaty (GB 2271693).

Serfaty discloses an apparatus and method for transmitting data comprising: an input that receives a digital data to be transmitted; a plurality of programmable modulators (QAM); a plurality of programmable mixers; a plurality of programmable PSF filters and a summation unit (32). Serfaty differs from the present invention that the filters are not band pass filters. However, it would have been obvious to one of ordinary skill in the art at the time the invention was made to replace the PSF filters of Serfaty by the band pass filters since both PSF filters or band pass filters remove any undesirable components. (Functionally equivalent) The apparatus is integrated within a single integrated circuit. As for the input receiver being a Gigabit Media Independent Interface. Such particular limitation is well known in the art of communication thus it would have been obvious to use such input device since there is no new or unexpected result by doing so. Serfaty is silent in terms of the control input that controls the number of bits, which are provided to each modulator and the type of modulation to be used. However, such control is inherent in the apparatus of Serfaty

Art Unit: 2631

because the number of bits, which are provided to each modulator and the type of modulation, are predetermined (controlled). See figs. 1-2.

Response to Arguments

Applicant's arguments with respect to claims 1-9 and 40-46 have been considered but are moot in view of the new ground(s) of rejection.
